

MAKING AIRPORTS SAFE & FLEXIBLE

THE PROBLEM

Airports often require flexible layouts. In all airports there are large open plan spaces where people are being moved through and information is being displayed. Requirements for security change faster than spaces can be re-designed and as policies for each airline dictate differing solutions which some airports find hard to provide. As in any high throughput venue there is a need for flexible first aid facilities - and with the stresses of travel airports see their fair share of medical incidents.

THE SOLUTION

KwickScreens can solve these problems, like at Geneva Airport where they have used branded screens to section off a security area at a gate for passengers, create a partitioned pre boarding facility to prevent bottlenecks in queues, and to disguise maintenance works within the terminal.

Using KwickScreens in this manner is far more cost-effective than expensive remodeling, provides flexibility for the ever changing requirements in airports, and can visually aid areas with branding.

THE BENEFITS

- Clearly partition off areas or create flexible zones adaptable to multiple uses.
- Use branding and imagery to enhance the passenger experience.
- Create flexible queuing partitions, security zones and privacy for medical requirements.
