

CREATING DEMENTIA FRIENDLY ENVIRONMENTS

“We use KwickScreens as reminiscence backdrops for patients with dementia. The power of the image creates the memory of an environment that they are used to”.
 Stephen Moore, Activities Coordinator
 Order of St Johns Care Trust, Westbury Court Gloucestershire

THE PROBLEM

Medical environments such as hospitals and care homes can be stressful and disorientating for patients with Dementia. Not just because they are unfamiliar, but because often, everything looks the same.

THE SOLUTION

KwickScreens have printable areas of 3m x 1.5m, so we are able to create life-size high fidelity prints to recreate environments that patients are familiar with, helping to recall and evoke memories. The metal body can be painted in any colour to help with association and way finding. A range of accessories are available, including signs to provide clear identification of bed bays, social spaces and other zones. KwickScreens can be printed with different seasonal environments on them to also help with recall and awareness.

THE BENEFITS

- Low cost
- Distinctive reminiscence imagery
- Way finding
